

VALUE LABELS

I. Value Labels for Recoded Variables

These variables may have different coding schemes than shown on the interview forms, or may be previously continuous variables that have been collapsed into categories (eg. age) or at the extremes.

A. Variables which have been Collapsed at the Extremes

The minimum and maximum values of the following variables represent the 5th and 95th percentiles, respectively, of the corresponding continuous variables. The continuous variables have been replaced by these variables in the data files.

WEIGHT (current weight)

WGT50 (weight at age 50)

BMI (body mass index)

STHT (standing height)

SHTHT (sitting height adjusted)

WAIST (waist circumference)

HIP (hip circumference)

YNGHT (height as a young adult: this variable was calculated from feet and inches reported and then collapsed)

Number of pregnancies (PRGNT) and number of live births (LIVBTH) have been collapsed at 7 such that any woman with numbers at or greater than 7 have "7" recorded for these variables.
